## ACME CARGO MANAGEMENT SYSTEM

ACME CARGO MANAGEMENT SYSTEM (CMS) consists of the following main modules:

### 1. Cargo Operations

- Airline billing
- AWB received list
- Freight invoicing
- Overland entries
- Sea Freight manifest
- Airline Freight manifest

### 2. Financial Accounting Module

- All accounting details
- Customer outstanding
- Balance sheet
- Trial balance
- Profit & loss statement

### 3. Administration & Security Module

### 4. Reports

- **Cargo Operation:** This module maintains all the processes needed by a cargo company for daily operations.
- **Financial Accounting:** This module maintains all the accounting details of the projects, including the customer outstanding. This module is integrated with all other modules, hence all commercial transactions are automatically updated here.
- **Administration & Security Module :** This module takes care of User Creation, User Rights (Module Rights, Outlet Rights, and Menu Rights), Outlet Creation, Outlet Item Permission, etc. One of the most important Reports of this module is USER HISTORY. Management can check every transaction that is done through our software. Malicious users can be identified by this report.  
**User-Level** - Logging into the application can be restricted through User name and Password. Password is stored in encrypted format in Database.  
**Module-Level** - Module Level restriction is given for each user, depending upon his Department / Section, Nature of work etc.  
**Form Level** - Depending upon the rights given to users, they can access the information.  
**Entry Level** - Users can be able to View, Insert, Edit, Delete and Print, depending upon the privileges they have.
